The invention describes a method of monitoring differential expression of the genes in a first Bacillus cell relative to expression of the genes in cother Bacillus cells to a substrate containing array of Bacillus isolated from Bacillus cells to a substrate containing array of Bacillus cales isolated from Bacillus cells to a substrate containing array of Bacillus cells to a substrate some determining to a spot in the array. The method is useful for measuring the expression of a spot in the array. The method is useful for monitoring contains or more second Bacillus cells. The method is useful for monitoring global expression of several genes from a Bacillus cell, discovering new genes, identifying possible functions of unknown open reading frames and contituding ene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions, contituonmental stress or other physiological provocation. Extensive follow continumental stress or other physiological provocation. Extensive follow continumental stress or other physiological provocation. Extensive follow continumental stress or other physiological provocation is available.

This sequence represents a genomic sequence information is available.

This sequence represents a genomic sequence information is available.

This sequence represents a genomic sequence information is available.

The invention. Note: The sequence data for this patent did not form to part of the printed specification, but was obtained in electronic format continuence.
Monitoring differential expression of several genes in first Bacillus cell relative to expression of same genes in one or more second Bacillus cells, by using substrate containing Bacillus genomic sequenced tag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           43.5%; Score 459; DB 6; Length 459; 100.0%; Pred. No. 2.2e-130;

The invention describes a method of monitoring differential expression of genes in a first Bacillus cell relative to expression of the genes in cother Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus genomic sequenced tags (GST), examining the array, and determining a spot in the array. The method is useful for measuring the expression of a spot in the array. The method is useful for monitoring can one more second Bacillus cells. The method is useful for monitoring genes in a first Bacillus cells. The method is useful for monitoring calobal expression of several genes from a Bacillus cell, discovering new genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring chemes in which Bacillus cells adapt to changes in culture conditions, in which Bacillus cells adapt to changes in culture conditions.

This sequence represents a genomic sequence information is available. This sequence represents a genomic sequence tag (GST) used in the method of the printed specification, but was obtained in electronic format partectly from WIPO at ftp. wipo.int/pub/published_pct_sequences

The present invention describes an isolated polymucleotide (I) of Allolococcus otitidis genomic DNA, which encodes an antigenic protein. Allolococcus otitidis ganomic DNA, which encodes an antigenic protein. Allolococcus otitidis is a gram-positive bacterium. Also described: (1) an isolated polypeptide that is encoded by the polymucleotide (I), its complement, despenarate variant or fragment; (3) a genetically engineered composition comprising the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide, its composition comprising the polypeptide of (1); (6) a pharmaceutical composition comprising the captression vector; (6) a pharmaceutical composition comprising the copyreptide of (1); their biological equivalent or fragment; (8) communishing against Allolococcus otitidis by administering to a host the immunogenic composition; (9) detecting and/or identifying Allolococcus otitidis in the biological sample; (10) a kit comprising a container. Containing the novel polymucleotide, its degenerate variant or fragment, or the antibody of (4); and (11) producing a polypeptide by culturing the containing the novel polymucleotide, its degenerate variant or fragment. Co the antibody of (4); and (11) producing a polypeptide by culturing the polymucleotides, onlypeptide and compositions of the present polymucleotides, antibodies and diagnosing diagnesses, drug screening assays and monitoring of effects during detecting Alloicoccus otitidis antigen contidis. The present sequence encodes an Alloicoccus otitidis antigen

The present invention describes an isolated polynuciecture.
Alloiococcus otitidis genomic DNA, which encodes an antigenic protein.
Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1)
Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1)
Can isolated polypeptide that is encoded by the polynuciectide (1); (2) an expression vector comprising the novel isolated polynuciectide (1); its complement, degenerate variant or fragment; (3) a genetically engineered composition comprising the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide of (1) and a carrier; (7) a protein char is comprising the expression vector; (6) a pharmaceutical composition comprising the carrier; (7) a protein char is comprising the polypeptide of (1), their biological equivalent or fragment; (8) immunogenic composition; (9) detecting and/or identifying Alloiococcus otitidis in the biological sample; (10) a kit comprising a container containing the novel polymeticotide, its degenerate variant or fragment, or the antibody of (4); and (11) producing a polypeptide by culturing the polymucleotides, polypeptides, antibodies and compositions of the present invention can be used for treating and diagnosing diseases, drug creening assays and monitoring of effects during drug clinical trials.

The polymucleotides are useful for expressing and detecting Alloiococcus otitidis. The present invention.

Expression the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        178
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     981

                                                                    셤
                                                                                                                                                                              ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABPS3124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained

The invention describes an isolated nucleic acid comprising a nucleotide sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO: 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any of 3772-7544) as given in the specification. Also described are: a recombinant expression vector; a cell comprising a recombinant expression vector of (1); producing an S. epidermidis polypeptide; an isolated nucleic acid comprising a nucleotide sequence of at least 8 nucleotides in length; a vaccine composition for prevention or treatment of an S. epidermidis infection, comprising a nucleic acid cited above and a carrier; treating a subject for S. epidermidis infection; a recombinant or substantially controlly preparation of an S. epidermidis polypeptide or its fragment; a subject for S. epidermidis infection; a recombinant or substantially concens composition of an S. epidermidis polypeptide or its fragment; a subject for sequence of a Staphylococcus succided in a sample; a computer readable medium having recorded in it the nucleotide sequence with SEQ ID NO: 1-3772 or its fragments; a computer based system for identifying fragments of the Staphylococcus genome of commercially importance; a computer based system for identifying fragments of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment compositions of the present invention are useful for the diagnosis, prevention and/or treatment of an Staphylococcus epidermidis bacterial confection. This sequence encodes a S. epidermids protein of the invention.
antibacterial; vaccine; antisense therapy; Staphylococcus epidermidis; recombinant expression vector; infection; computer readable medium; computer based system; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polypeptide and encoding nucleic acid derived from Staphylococcus epidermidis, useful for diagnosing, preventing and/or treating an S. epidermidis bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Staphylococcus epidermis polynucleotide seqid 364.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 5; SEQ ID NO 364; 741pp; English.

                a Streptococcus pneumoniae genomic sequence, a fragment or degenerate variant of the polynucleotide or a nucleic acid sequence 95% identical to one of the polynucleotides. The S. pneumoniae polynucleotides and encoded polypeptides (ABPB1299-ABPB1674) are useful for treating or preventing S. pneumoniae infections or non-systemic diseases, e.g. otitis media, which are induced or exacerbated by S. pneumoniae. These are also useful for detecting S. pneumoniae in a biological sample or disgnosing S. pneumoniae in a biological sample or disgnosing S. pneumoniae in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            252

US-09-540-236-555
US-09-540-236-555
Sequence 555, Application US/09540236
Patent No. 6673310
GENERAL INFORMATION:
APPLICANT: GATY L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/540,236
CURRENT PILING DATE: 2000-04-04
NUMBER OF SEQ ID NOS: 3840
SEQ ID NO 555
LENGTH: 624
                                                                 Sequence 6958, Application US/09489039A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 361, Application US/09543681A
Patent No. 6605709
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/543,681A
CURRENT FILING DATE: 2000-04-05
PRIOR PILING DATE: 1999-04-09
NUMBER OF SEQ ID NOS: 8344
SEQ ID NOS: 8344
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                967 AAGCGATCGAGAATGAGGACGAAGCATTTCTCGTCAAATTTCCCGGCGTAGGCAAAAAA 1026
